

TiO₂ water pad — output of the on-chip pad amplifier (scope ch2)

one continuous 1 kHz record, scope_20260829_094236.csv. The second amplifier (ch1, jack input) is not driven here and is not shown.

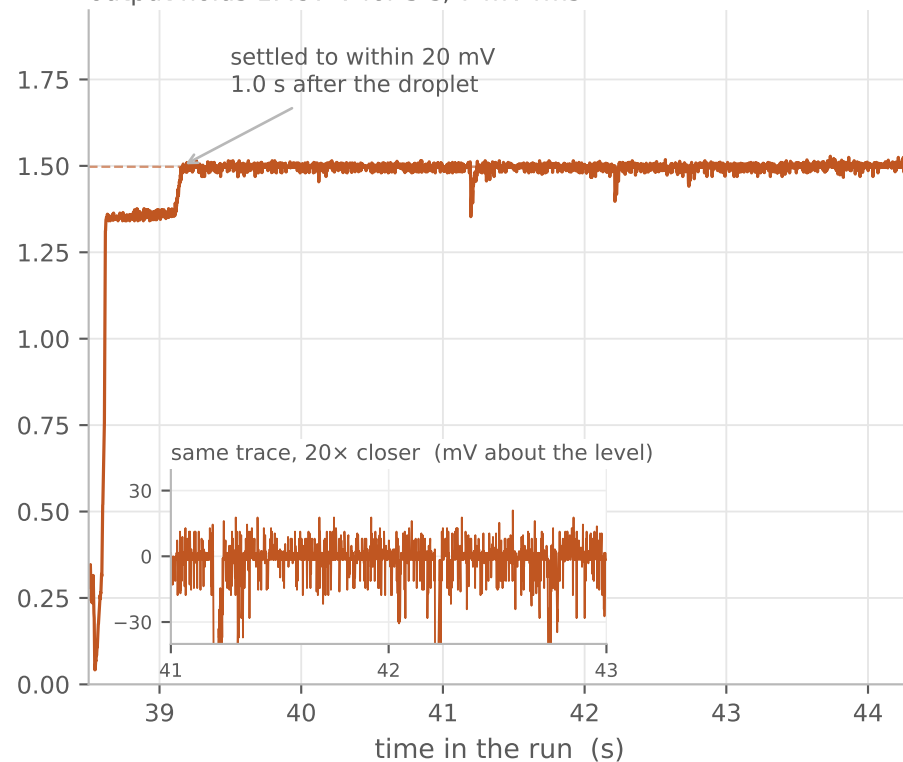

1 — wetting

dry, the pad is an antenna; water lands and that stops

2 — it settles, and stays quiet

output holds 1.497 V for 5 s; 7 mV rms

3 — saline, and the output signal

the salt drives the output +308 mV, up to the rail
